Scripps Institution of Oceanography Contributions Index

Scripps Institution of Oceanography published an annual compilation of reprints from 1938 – 2001, ending with volume 71. Submission of publications to the Contributions by Scripps authors was voluntary, so the citations in the Contributions are not a complete institutional bibliography for these years.

This index is in three parts:

- 1) **1938 – 1969**, produced by scanning a typescript index compiled for that timespan. The authors are in alphabetical order, title of their reprint is given, and reference is given to the Contributions Number and Contributions Volume in which that reprint appears. The actual citation in which their publication appears is not given, and one has to look in the print Contributions series to determine the original citation. Optical character recognition (OCR) was run against this scanned typescript with no error correction as a step in producing this PDF. Therefore zero results from a search does not mean the word(s) or phrase does not appear, since the OCR may have not recognized and translated a word(s) or phrase correctly. Similarly the search results from searching word(s) or phrase may not include all occurrences of that word(s) or phrase.
- 2) **1970 – 1981**, produced by scanning the index in each volume of the Contributions for those years. The authors are in alphabetical order, with title and original citation of their reprint given. Reference is also given to the Contributions Number and Contributions Volume in which that reprint appears. Authors are multiply listed, such that a specific citation appears under each co-author. Optical character recognition (OCR) was run against these scanned pages with no error correction as a step in producing this PDF. Therefore be wary of search results as noted in #1 above.
- 3) **1982 – 2001**, produced from the text files used to create the Contributions. The authors are not in order, and title and original citation of their work is given. Since these years were produced from text files, word / phrase searching is 100% reliable.
